Predict: what happens next in a text.

					Predict what happens next in a text. (What will happen next?) "Relevant" – based on text clues	I need help to make a prediction about what happens next in a text.	I can make a relevant prediction about what happens next in a text if I am prompted or directed.	I can make a relevant prediction about what happens next in a text and clarify its meaning.	**and** I can justify my prediction by - giving reasons based on the text to support the prediction. - giving reasons based on background knowledge to support the prediction.	**and** I can : - **provide evidence** to support the reasons. - **check/test/monitor** my predictions by reading to confirm or change my predictions - **evaluate** the likelihood of a prediction about what happens next in a text.
	Predictions are not relevant/do not make sense. No use of relevant prior knowledge - text clues, headings illustrations, etc.	Makes a relevant prediction.	**and** elaborates to clarify meaning.	**and** backs up prediction using relevant prior knowledge - text features, clues, background information.	**and** provides evidence **and** checks the prediction by reading on to confirm or change prediction **and** makes a claim about the likelihood of the prediction occurring.
